

# Section 20 Challenge

## Instructions

1. Create the components, service and module in a new feature folder called 'orders'
  - a. order.module.ts
  - b. order-routing.module.ts
  - c. order.service.ts
  - d. orders.component.ts
  - e. order-detailed.component.ts
  - f. orders.service.ts
2. Add the routes for the orders
3. Lazy load the orders module in the app-routing.module.ts
4. Add 2 methods in the order service to get the list of orders and a single order
5. Create the orders list in the orders.component.ts and its template - The HTML has been provided for this in the Section20 folder in the StudentAssets folder.
6. In the order-detailed component get the individual order and display it in the browser. The HTML has been provided for this in the Section20 folder in the StudentAssets folder.
7. Update the checkout-success page to allow the user to view the created order or go to the orders list, depending on whether or not we have the order. We need to get the order id from NavigationExtras.
